

Why Start Automating Your Web Testing

Boost Your Test Coverage

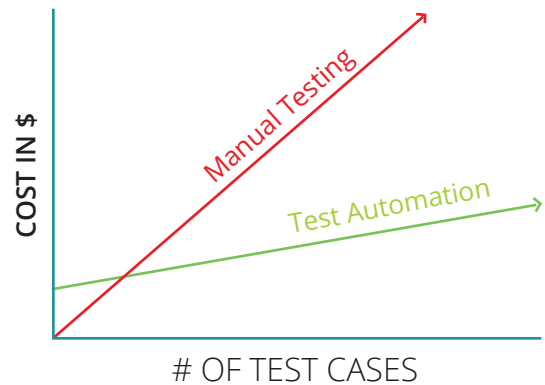

When you automate your functional testing you'll be increasing the amount of features, test cases, and code that can be tested. Speed your way to sufficient test coverage to deliver quality code.

Continually Test For Faster Deployments

Integrate your web testing with your continuous delivery process to test quickly upon each build of your application. Run nightly tests to catch more bugs in production code, or fire off a set of test cases with each push of new code.

Increase Your ROI and Cost Effectiveness

Testing your application or website can be costly, as the GUI layer is often constantly changing and scaling manual testing will be expensive. Test automation can improve your ROI by providing a scalable solution that gets cheaper over time.

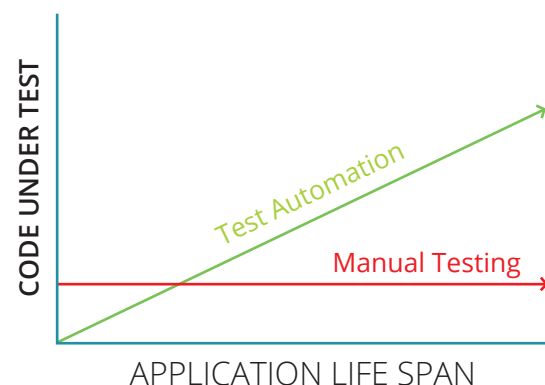

Reuse Test Scripts

When your GUI layer changes, test automation scripts can be quickly changed as well to accommodate changed or new features. Do more regression testing without having to write new tests from scratch.

Test More Browsers and Environments

Automated testing allows you the benefit of running one test script across a variety of operating systems, browsers, and mobile devices. Install different pieces of
